Speedtest Names HKBN the Fastest Broadband Provider in Hong Kong

(21 June 2017 – Hong Kong) Hong Kong Broadband Network Limited (“HKBN”) announced today that it has been rated the fastest broadband provider in Hong Kong according to Speedtest by Ookla, a global leader in Internet performance testing and metrics.

According to Speedtest’s Market Report on Hong Kong published this month, Hong Kong ranks third in the world for broadband Internet download speed between Q4 2016 and Q1 2017, achieving an average speed of 142.65 Mbps.

In comparing the performance of the four major broadband service providers in Hong Kong, Speedtest asserts that HKBN’s speeds are “unmatched in the market”. HKBN boasts an average upload speed of 544.18 Mbps and an average download speed of 544.07 Mbps, vastly faster than other ISPs in Hong Kong.

When analysing Hong Kong’s overall performance, the average speed is used to represent the experience of a typical consumer in Hong Kong. To compare the performance of Internet service providers, Speedtest uses the top 10% of each ISP’s Speedtest results, aiming to provide an accurate view of the top-end performance of each ISP. Speedtest is a globally popular way of measuring Internet performance. Insights from Speedtest Report are based on the actual Internet speeds experienced by hundreds of millions of consumers around the world.

HKBN CTO & Co-Owner Gary McLaren said, “We are proud to know that our outstanding network performance has been duly recognised by independent global leader Speedtest. Our top-notch fibre network, advanced facilities and round-the-clock network operation management ensures that our customers enjoy the best Internet experience in this data hungry era. Currently, with about one-third of all households in Hong Kong connected to HKBN broadband, we look forward to bringing more top-value services to more people across Hong Kong.”
